GREEN RESOURCES PTE LTD
SUSTAINABLE SOURCING AND TRADING POLICY

Green Resources Pte Ltd is committed to responsible sourcing and trading practices that support environmental sustainability, ethical conduct, and long-term partnerships. As a trading company specializing in renewable, waste, and residue feedstocks, we prioritize transparency, risk management, and continuous improvement across our supply chain. This Policy provides a practical and achievable framework aligned with industry expectations and global sustainability standards, supporting customer due-diligence and compliance needs while remaining realistic about the role and influence of a trading company.

1. PURPOSE

This Policy provides a clear reference for how Green Resources manages sustainability risks and expectations in its supply chain. The key objectives are to:

a. Ensure all sourcing and trading activities comply with applicable laws and ethical principles.
b. Promote responsible practices among suppliers and business partners.
c. Manage environmental and social risks using a practical, risk-based approach.
d. Provide customers with transparent, traceable, and reliable information regarding the materials we source and trade.
e. Support continuous improvement without over-committing beyond our operational control.

2. SCOPE

This Policy applies to all sourcing, procurement, trading, storage, and export activities conducted by Green Resources Pte Ltd. It covers all employees, suppliers, service providers, and logistics partners involved in our supply chain. Suppliers and partners are expected to adhere to this Policy as a condition of doing business with Green Resources.

3. PRINCIPLES

3.1. Legal and Ethical Compliance

a. Green Resources conducts all operations in compliance with applicable laws and regulations.
b. We maintain a zero-tolerance policy for bribery, corruption, fraud, or falsification of documents.
c. We expect partners to uphold integrity, maintain accurate records, and be transparent in all business interactions.

3.2. Responsible and Risk-Based Sourcing

As a trading company, Green Resources prioritizes responsible sourcing through a practical, risk-based approach:

a. We request relevant documentation and information from suppliers to verify compliance with legal and sustainability requirements.
b. We prefer materials that are traceable to a credible point of origin and, where applicable, accompanied by recognized certifications or declarations.
c. Where suppliers do not yet meet full sustainability expectations, we engage constructively to encourage improvements rather than immediate disengagement, unless significant non-compliance is identified.
d. We conduct periodic assessments of supplier risks, based on geography, feedstock type, regulatory environment, and available documentation.

3.3.1. Environmental Considerations

Green Resources is committed to minimizing environmental risks linked to the materials we trade. We aim to:

a. Avoid knowingly sourcing from areas associated with deforestation, peatland development, or significant ecological harm.
b. Prioritize renewable, waste, and residue feedstocks that support circular-economy objectives.
c. Encourage suppliers to adopt environmentally sound practices and comply with applicable environmental regulations.
d. Promote efficient logistics and storage practices to reduce waste, spills, and environmental impact during handling and transportation.
e. We acknowledge that as a trading company, our role is primarily to promote responsible behavior and use our influence where appropriate, not to directly manage upstream land use or production practices.

3.4. Human Rights and Labor Standards

Green Resources respects internationally recognized labor and human-rights principles. We expect suppliers and partners to:

a. Avoid the use of forced, bonded, trafficked, or child labor.
b. Provide safe and fair working conditions consistent with applicable laws.
c. Treat workers with dignity, fairness, and non-discrimination.
d. Respect the rights of local communities and, where relevant, indigenous peoples.
e. Our due-diligence efforts focus on identifying risks and working with suppliers to address issues where feasible.

3.5. Traceability and Transparency

a. Green Resources maintains documentation systems to track materials from supplier to customer, ensuring clarity and accountability throughout the trading process.
b. We expect suppliers to provide accurate documentation on origin, quality, classification, sustainability claims, and regulatory compliance.
c. We communicate openly with customers regarding available information, risks, and limitations associated with supply-chain data.
d. We maintain channels for stakeholders to raise concerns related to sustainability or ethics, and we commit to reviewing and addressing them appropriately.

3.6. Quality Assurance

a. We ensure that materials are handled, stored, and transported safely and in compliance with applicable regulations.
b. We work with logistics partners who maintain suitable quality, safety, and environmental management practices.
c. Our internal systems and processes are regularly reviewed to maintain product integrity and minimize operational risks.

Green Resources Pte Ltd implements this Policy across all departments and functions, ensuring consistent application throughout the organization. When risks or non-compliance issues arise, we take a balanced and proportionate approach that may involve dialogue, corrective actions, enhanced monitoring, or, where necessary, disengagement. This Policy is reviewed periodically to maintain alignment with evolving regulations, industry standards, and customer expectations, supporting continuous improvement across our operations.
